The Best of both worlds!

Our 28 VDC programming line incorporates the best of both solid state and conventional electromechanical techniques. Where integrated circuits work best — we use integrated circuits; where relays work best — we use relays. This design approach, coupled with our large volume, enables us to provide dependable and reliable modules at prices generally lower than competing

lines, and all without any sacrifice in quality.

If you are looking for ways in which to improve or expand your present system, or are looking for ways to economize when purchasing a new system, write or phone for our latest catalog.
